

Wide Range and seals.

Type: DWR ROUND

Sector: food – various

In various sectors and more markedly in the food sector, the customer's need is to affix a seal label on the product. This type of label is usually applied automatically with very complex systems, which are absolutely not comfortable when the customer's need is to label "small numbers". This is where the **DWR ROUND** comes into play!

Applying a seal label with the **DWR ROUND** is simple and the last step of the process must be done manually. The seal, in fact, after labeling remains protruding on the edge of the product and the operator completes the operation by pushing it and making it adhere to the lid of the jar.

The field of application of the **DWR ROUND** therefore widens further, giving the possibility to the end user who does not have to label large quantities, to fully satisfy the needs of the market.
