

Wide Range: the solution for coffee roasters.

Type: WR FEEDER LAB

Sector: coffee roasting

WR FEEDER LAB is the new solution proposed by **Wide Range** for small and medium coffee roasters who need to customize the packaging even for small quantities.

It is no longer necessary to have stocks of pre-printed packs. WR FEEDER allows to avoid waste and to have in real time the application of the taste label on non-personalized bags, with the possibility of buying neutral packs in quantity.

The solution involves a WR FEEDER LAB that feeds packs connected to an automatic labeler for the final application of the taste label on the neutral pack coming from the FEEDER.

All this operation carried out with a high rate of up to 80 envelopes per minute. The process can be perfected by neatly collecting the personalized envelopes in a motorized stacker.
